# musicbook:50

listen. relax. enjoy.

**Do you love music?** Do you value perfect sound quality? Do you like relaxed listening with natural sound? Are party volume levels and giant loudspeakers not your thing? Do you want to keep your living room free from heavy power amplifiers that heat up and devour electricity?

What if there were a small but powerful amplifier you could add to your loudspeakers that would provide the

finest in music enjoyment, but go easy on the environment and your wallet?

The musicbook 50 is a fully balanced stereo power amplifier in Class D technology based on a circuit concept protected by several patents, the UCD amplifier. With all-discrete circuitry and careful fine-tuning, the technology fulfills its full sonic potential. Detailed, emotional and with fine treble

resolution, this power amplifier surpasses by far its price class. Further advantages of the Class D principle include extremely low energy consumption and low heat development. The musicbook 50 is the ideal performance power amplifier for small and medium-sized loudspeakers. If enjoying music is your top priority, we have an insiders' tip for you!

**Front View** Standby and protection circuit displays. The amplifier is equipped with a highly sensitive signal detector that switches the device on and off automatically. This avoids unnecessary energy consumption. The protection circuits work efficiently, limiting the output current to permissible levels, which protects the loudspeakers from damage.

**Loudspeaker ports** for connection of the power amplifier to the speakers. The amplifier plays great with high-quality two-way loudspeakers and smaller floor-standing speakers, where its full sonic potential is reached. Discover how uncomplicated perfect music playback can be!

**Two analog inputs** for connection of the musicbook front-ends. Non-magnetic, gold-plated Cinch sockets for optimum signal transfer. The preferred connection is balanced, as all musicbook components are fully balanced. The device automatically detects which connection is being used. If both cables are plugged in simultaneously, only the balanced input is activated.

**Loudspeaker ports** for connection of the power amplifier to the speakers. The amplifier plays great with high-quality two-way loudspeakers and smaller floor-standing speakers, where its full sonic potential is reached. Discover how uncomplicated perfect music playback can be!
